This comprehensive encyclopedic reference provides rapid access to focused information on molecular pharmacology for research scientists, clinicians and advanced students. With the A-Z format of around 2000 entries, about 200 authors provide a complete reference to the area of molecular pharmacology. The book combines the knowledge of classic pharmacology describing drug action as well as the more recent approach of the precise analysis of the molecular mechanisms by which drugs exert their effects. Short keyword entries define common acronyms, terms and phrases. In addition, detailed essays provide in-depth information on drugs, cellular processes, molecular targets, techniques, molecular mechanisms and general principles.
