Heme Notes: A Pocket Atlas Of Cell Morphology

Synopsis

A DAVISâ™S NOTES BOOKCell morphology at your fingertips! This pocket-sized atlas delivers concise, yet comprehensive coverage of the morphology of normal and abnormal peripheral blood and bone marrow cells. Organized by cell line, it emphasizes morphological identification. With more than 300 full-color photographs in the popular Davisâ™s NotesÂ® format, itâ™s the perfect reference at the bench, in class, or during clinical rotationsâ” anytime you need to identify cells. And, its write-on/wipe-off pages let you take notes in any setting. Heme Notes is the ideal companion to Denise M. Harmening's Clinical Hematology and Fundamentals of Hemostasis, which provides comprehensive coverage of the pathogenesis, clinical features, diagnosis, and laboratory testing and treatment of hematologic disorders.

Customer Reviews

This is a fabulous study tool! My Hematology professor suggested this to the class at the beginning of the semester. I do not know how I would be able to perform a differential or be able to clearly identify different cells that are so close together without this tool. I would highly recommend this product to anyone who feels they need to freshen up on hematology or just someone starting to learn. This is a wonderful product I am extremely happy with the product.

I choose this book because it said you can write on the pages with ball point pen and wipe clean with alcohol which I tried and it works. At first I didn't realize it was a pocket sized book until it came in

the mail. But also like that feature now too. The best part is that the pages are tabbed for quick and easy to find cells. I have recommended this book to other co-workers.

This is a very handy reference to have. Nice size, and nice quality. There's much more to it than I thought. I'm very pleased.

It's a great for an easily accessible reference for unusual cells. It does not go in to great detail but it's just that a great quick reference.

It is like having a complete textbook at your fingertips. Great pictures and explanations of how to differentiate between cells etc.

Its useful for clinical rotations incase you need to refer back for hints and clues how to differentiate cells, I recommend this pocket size book for those being medical technologists.

This book has been very helpful for my hematology class. My only issue was that this book uses the FAB classifications instead of WHO classifications.

I like this atlas because of its small size that can fit in your pocket and clear pictures of the cells.
