Customer Reviews

â € Publisher: Springer, Berlin, Heidelberg Joseph J Grenier MD PhD This textbook concerns an atlas and procedural based review of lung and heart surgery using the endoscope. Generally, 3 or 4 different port windows are used to accomplish this. The illustrations are well depicted and photographed making this an ideal reference for thoracic surgeons, residents, CVT Fellows, and students. The experience is drawn from the European perspective. It is very fortunate that the pictures are in color to make these delicate procedures understandable. I have no hesitation in recommending this book to all surgeons.
