Atlas Of Robotic Cardiac Surgery

Synopsis

Robotic surgery is currently devoid of adequate didactic material necessary to facilitate daily application in cardiothoracic surgical practice. This book represents the definitive atlas that will lead both the practicing and new cardiothoracic surgeons in these methods. It will define the operative pathway of each procedure, from beginning to end, for surgeons who wish to be a complete robotic cardiac surgeon and include hints and procedural pitfalls derived from the experiences of chapter contributors. The book will be illustrated with high quality illustrations and color photographs from surgical operations where appropriate. Leading surgeons have contributed to the book and provided sample illustrations for their respective chapters. Anesthetic and cardiopulmonary support preparation for each operation will be included and selected references will be provided to emphasize evidence-based outcomes.

Customer Reviews

The Editor of the Atlas of Robotic Cardiac Surgery is W. Randolph Chitwood, Jr., MD, FACS, FRCS of England. Dr. Chitwood performed the first robotic mitral valve surgery in the US and many other countries. He, also, trains surgeons from all over the world in robotic mitral valve surgery. We are working on getting this error fixed immediately.
